

CLINICAL MEDICAL RECORD

PATIENT INFORMATION

Patient ID:	MRN-2024-001
Name:	Sarah Johnson
Date of Birth:	March 15, 1985
Gender:	Female
Address:	123 Health Street, Medical City, MC 12345
Phone:	(555) 123-4567
Insurance Provider:	MediCare Plus
Policy Number:	MCP-789012345

MEDICAL HISTORY

Chief Complaint: Patient presents with persistent hypertension and occasional chest pain. **History of Present Illness:** The patient reports having high blood pressure for the past 5 years. She has been taking antihypertensive medication but reports inconsistent compliance due to side effects. Recent episodes of chest pain have been mild and resolve with rest. No associated symptoms such as shortness of breath, nausea, or diaphoresis. **Past Medical History:** • Hypertension (diagnosed 2019) • Type 2 Diabetes Mellitus (diagnosed 2020) • Hyperlipidemia • No history of cardiovascular events **Medications:** • Lisinopril 10mg daily • Metformin 500mg twice daily • Atorvastatin 20mg daily • Aspirin 81mg daily **Allergies:** No known drug allergies. Environmental allergies to pollen. **Social History:** Non-smoker, occasional alcohol consumption (1-2 drinks/week). Works as a teacher. Exercises 3 times per week. Married with two children. **Family History:** Father had myocardial infarction at age 65. Mother has hypertension. No family history of diabetes or cancer.

VITAL SIGNS

Date/Time	BP	HR	Temp	Weight	BMI
2024-01-15 09:00	148/92	78	98.6°F	165 lbs	27.2
2024-01-10 14:30	152/94	82	98.4°F	166 lbs	27.4
2023-12-20 11:15	145/88	75	98.8°F	164 lbs	27.0

ASSESSMENT AND PLAN

Assessment: 1. Hypertension, poorly controlled - Blood pressure readings consistently above target goals. 2. Type 2 Diabetes Mellitus, well controlled - Recent A1c of 6.8%. 3. Hyperlipidemia - LDL cholesterol elevated despite statin therapy. 4. Chest pain, atypical - Likely musculoskeletal in origin, but cardiac workup recommended. **Plan:** 1. Adjust antihypertensive regimen: Increase Lisinopril to 20mg daily, add Amlodipine 5mg daily. 2. Continue current diabetes management with lifestyle modifications and metformin. 3. Increase Atorvastatin to 40mg daily for better lipid control. 4. Order cardiac workup: EKG, echocardiogram, and stress test. 5. Lifestyle counseling: Weight management, increased physical activity, DASH diet. 6. Follow-up appointment in 2 weeks to review test results and medication adjustments. 7. Daily home blood pressure monitoring. **Patient Education:** Discussed importance of medication compliance, lifestyle modifications, and warning signs of cardiovascular events. Provided educational materials on hypertension management.
